# **Social norms and traffic behavior: *Citizenship Culture* as public policy in Bogotá, Colombia**

**Javier Guillot**

Masters in Public Policy program  
Hertie School of Governance (Berlin, Germany)  
with the support of the German Academic Exchange Service (DAAD)

*and member of the team of*  
Corpovisionarios, Bogotá, Colombia

[International Workshop]: Frontiers in Transportation – Social Interactions  
Herrsching am Ammersee, August 3<sup>rd</sup>, 2013

I'm here today mostly to  
*share a story with you*

...a story I believe may  
spark your interests:  
suggesting fruitful avenues for  
**research and action**

...and that will surely leave  
**many open questions**

# The site and origin of the story:

## **Bogotá, Colombia**

- **Elevation 2,625 m (plateau on the Andes)**
- **Population (2013):**  
**7.7 million [Capital District]**  
**10.8 million [Metro]**

Arguably one of the most dangerous cities in the world in the late 1980s / early 1990s.

**...and indeed quite chaotic**

# 1995: Antanas Mockus

# *Cultura Ciudadana* in Bogotá

## 1995 - 2003

Stronger social regulation  
of interactions between  
citizens, and between  
citizens and public officials

Basic set of shared rules  
to take advantage of  
(and enjoy)  
the city's diversity

# Talk structure

- 1. The background: core elements of the *Citizenship Culture* approach**
  - Connection with social norms theory
- 2. The case: Citizenship Culture and traffic behavior — the reduction of traffic fatalities**
- 3. The upshot: Reflections, suggestions and open questions**

**the background**

# Mockus's starting point:

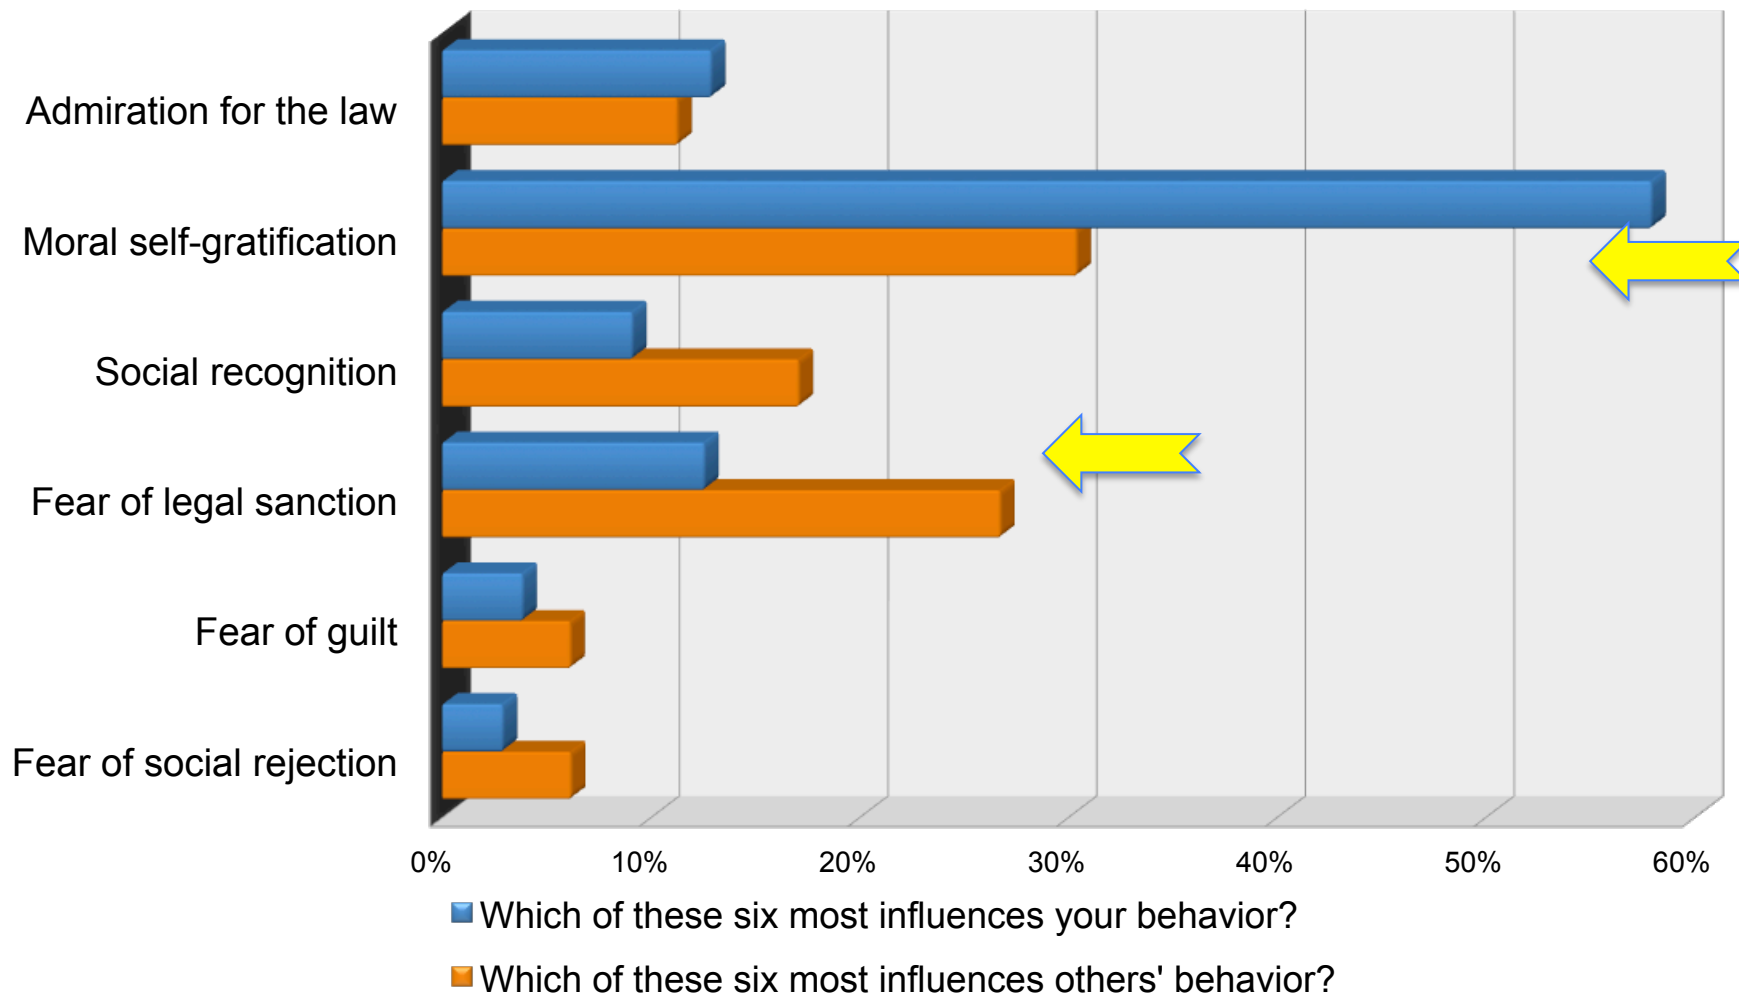

recognition of three different systems of norms that may regulate citizens' behavior

	<b>Legal norms</b>	<b>Moral norms</b>	<b>Social norms</b>
<i>positive</i> reasons	Legitimacy of authority / respect for the law	Good conscience	Esteem / Acceptance / Approval
<i>negative</i> reasons	Authority's penalties	Bad conscience	Disesteem / Rejection / Disapproval
[typical emotion in violator]	[fear]	[guilt]	[shame]

The *citizenship culture* challenge:  
to **harmonize** these behavior-regulating systems

# An asymmetry in attribution of motives: self vs. others

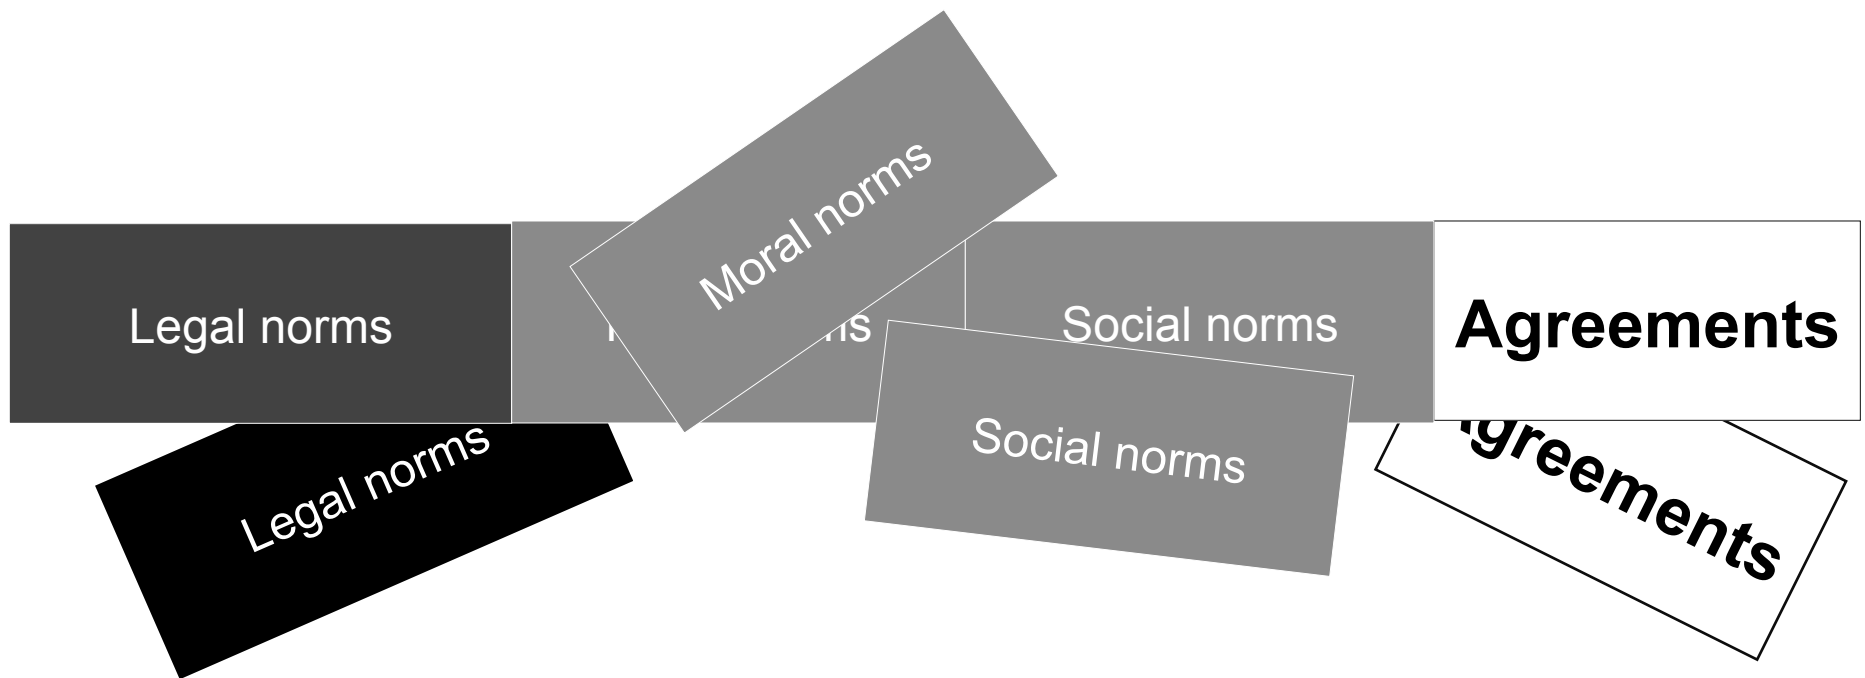

Regulatory systems: Legal, Moral, Social  
Average across surveys in 35 Colombian cities (2008 - 2011)

Source: **Corpovisionarios, Citizenship Culture Surveys**. Error for each survey < 5%. Total N = 32 520.

- This is consistent with solid social psychology: people tend to think of **themselves as intrinsically motivated** and of **others as extrinsically motivated**.
- *Plausible hypothesis*: in part explains why people frequently demand **harsh legal penalties** to confront what they deem socially harmful behaviors.
- **But in many cases, law enforcement *can* resort to pedagogy/social mobilization before force.**
- In particular when a (rather uncontroversially) collectively-harmful behavior is **widespread**.

**“Harmonization of norms” has been a central tenet of new institutional economists (since the 1990s)**

**But *how* can we translate this into public policy (if at all)?**

[Box animation: Mockus 2010]

# First: what is a social norm, after all?

- The term is used in the scientific/technical literature in an *inmense variety of ways* (both historically and at present)
- There is urgent need for a **wider agreement** on a definition that can prove to be:
  - Theoretically fruitful
  - Useful in the interpretation of available data
  - Somehow translatable to non-specialists

# A suggestion

**Cristina Bicchieri**  
***The Grammar of Society***  
**CUP, 2006**

# Social norm: a powerful definition

→ Bicchieri 2006, 2013

## A social norm

is a  pattern of behavior

such that  individuals prefer  
to conform to it

**on condition that**  
they believe that

 \* most people in their reference network  
conform to it

[empirical expectations]

 \* most people in their reference network  
believe they should conform to it

[normative expectations]

**What do I believe others  
do?**

**What do I believe others  
think one should do?**

## Important point #1

### Preferences vs. attitudes

#### Preferences may be *conditional*

If I have a *conditional* preference to do  $x$ , it is possible that my *attitude* toward  $x$  is not one of liking or endorsement.

- I may prefer to conform to a social norm, even if I don't like or endorse it.

# Normative expectations are the “essential ingredient” of social norms

- These are beliefs about **other people’s** beliefs!
- *Empirical*: beliefs about what other people do.
- *Normative*: beliefs about what other people believe that one should do—what *others* approve/disapprove.

# Reference network

If my preference for doing **x** is *conditional*, then beliefs *about others* matter.

But **who are those others?**

Reference network for latrine usage in a village (Shakya 2012)

# Reference network: what should seem obvious

- The group of people that influences my choice:
  - What I *expect them to do* matters
  - What I *think they believe one ought to do* matters
- But this may **vary** quite radically for different social norms.
- And it may even **vary** if we are considering one same pattern of behavior, but different individuals in one large population.
- **Thus, what reference network sustains a particular social norm is an empirical question.**

# The advantages of this definition

- It allows us to *clearly distinguish social norms* from other types of collective patterns of behavior.
- It is an **operational** definition, amenable to **formalization** (Bicchieri 2006).
- It is consistent with a wide body of **empirical evidence** (experimental, historical, ethnographical) and close to theoretical developments in various fields.
- And is it is straightforwardly “translatable”:  
UNICEF.

# The core of Citizenship Culture

	<b>Legal norms</b>	<b>Moral norms</b>	<b>Social norms</b>
<i>positive</i> reasons	Legitimacy of authority / respect for the law	Good conscience	Esteem / Acceptance / Approval
<i>negative</i> reasons	Authority's penalties	Bad conscience	Disesteem / Rejection / Disapproval
[typical emotion in violator]	[fear]	[guilt]	[shame]

# Premises of the **Citizenship Culture** approach to policy / programming

- An integral public policy or social-change program should strengthen **not only formal** (legally enforced) systems of sanctions, but also individuals' capacities to **self-regulate** (via moral norms) and **especially to regulate each other** (via social norms).
  
- Additionally, it must focus on the **harmonization of these regulatory systems**:
  - to reduce or erradicate the moral or social approval of illegal / collectively harmful behavior.
  - to increase and consolidate the moral and social approval of legal / collectively beneficial behavior.

# The Big Question

A social norm

is a  pattern of behavior

such that  individuals prefer to conform to it

**on condition that they believe that**

\* most people in their reference network conform to it  
[empirical expectations]

\* most people in their reference network believe they should conform to it  
[normative expectations]

**How do these expectations change? How are new ones created?**

# What key features explain the perceived success of *citizenship culture*?

- Simple diagnoses of target-problems with quantitative and qualitative tools; results had an influence on policy design.
- **Creative interventions:** make unfamiliar the familiar, or familiar the unfamiliar; break routines and habits; **resort to art.**
- Transform target-problems into objects of collective deliberation and reflection: **make it visible!**

**the case**

# A constitutional mandate: protect life

**Traffic-related fatalities in Bogotá and Colombia (rate per 100,000 inhabitants)**

Sources: Forensis INMLCF  
DANE Population Projections

**a series of  
innovative  
interventions**

# “Social regulation cards”

More than 350,000 were distributed

**Very high visibility, citizens willing to try them out**

[Corpovisionarios]

# “Social regulation cards”

- **Hypothesis:** a simple means of direct, transparent interpersonal communication that fostered **new normative expectations** consistent with prosocial traffic behavior.

# Mimes

Initially 40, then 400!

Dramatic success in terms of visibilization,  
*but replication questionable.*

[Corpovisionarios]

# Mimes

- **Hypothesis: Further strengthened normative expectations** and contributed to change in empirical expectations at crucial sites.
- Promoted public deliberation—it wasn't *just a show*.

# “Estrellas negras”: Black Stars

**Marked the spot of a death**  
resulting from a traffic accident.  
Later specified age and sex of deceased.

[Corpovisionarios]

# “Estrellas negras”: Black Stars

- Re-appropriation of a **common cultural symbol**: simultaneously fostered moral and social regulation – provided opportunities for discussing and coordinating beliefs (visibilization)

# Ley Zanahoria: “carrot law”

Restricted alcohol expenditure: 1:00 am. 2001: extended to 3:00 am.

- **Not only causally effective, but highly controversial** – led to **visible public discussion** (especially among relevant group of norm violators, but also among the public, widely conceived).

DANE Population Projections

[Corpovisionarios]

# What **didn't** work that well?

- Institutions were not set up to keep **Cultura Ciudadana** as a part of integral urban policy in Bogotá in subsequent mayorships.
  
- But more importantly: the **emphasis on the bottom-up nature of the process** could have been much stronger.
- The people should **own *cultura ciudadana***!

**the upshot**

# A few points worth noting

- **Extremely high visibility**: crucial for enabling/catalyzing change and coordination of empirical and normative expectations.
- Resorted to artistic elements **based on culturally recognized symbols**.
- Importance of **context-sensitivity**. Simple replication across different contexts probably ineffective.
- **Formal institutional strengthening** may not only be effective in and of itself: it may also work as a *signal* that indirectly strengthens social capital (e.g. interpersonal trust).

# Obstacles met in practice

- **Magical formulas** are sought after. The simple form of creative interventions tends to be copied, not the ideas behind them (example: mimes).
- But there seem to be **no magical formulas, no recipes** – rather, what we seem to be approaching is a **framework** for the design of potentially successful strategies.
- Many strategies are implemented without identifying a concrete target: **small, disorganized “campaigns” have no impact.**

# Challenges and open questions

Things many of you are *experts* in!

- **Implementation of rigorous & powerful impact evaluation:** go beyond correlation to establish evidence for *causation*.
- Distinguish between effects of different strategy components  
(**How can this be feasible in practice?  
How to parse out causal effects in such cases?**)

# Challenges and open questions

Things many of you are *experts* in!

## ➤ What is the reference network?

- Important for policy design
- The behavior and beliefs of *different* people may matter for *different* choices
- It could well be that just *observing* strangers (directly or indirectly) who share the same public space is already a relevant social interaction.

## ➤ The challenge of sustainability

How long? In what ways? How can we know?

# CORPO VISIONARIOS

A non-profit independent organization that since 2007 provides consultancy services, performs research, and designs and implements strategies to facilitate positive social change.

- Following and advancing the *Citizenship Culture* approach.
- Strong reliance on social-norms perspective.

# Something to take back?

Problem should be brought to public awareness

...where “**public**” means as **visible to all**:  
an object of collective deliberation and reflection

The **key** is to implement strategies  
that invite and guide people into  
**communicating more openly,  
transparently, and peacefully**  
**by creatively disrupting routine  
shared social expectations**

# Thank you!

**Special thanks to**  
*Frank Goetzke and Regine Gerike*  
for their generous invitation
